

What do I do to prepare for the Template?

Before the technician arrives please make sure the following are done:

1) Existing Cabinets

Remove all objects from the existing countertop.

We ask that you please clear your tops off completely as we use a laser to digitally measure your cabinets/tops and any items on your tops will interfere with the laser.

Have on site – Sinks, Faucets & Cook Top Range

2) New Cabinets

Make sure the cabinets are fully installed and leveled (including trim pieces and fillers)

Have on site – Sinks, Faucets & Cook Top Range

What do I do to prepare for the Install?

Before the installation crew arrives, please make sure the following are ready:

- 1) Have all plumbing, gas & electrical unhooked (We are not licensed plumbers or electricians, we will NOT disconnect or reconnect ANY plumbing or electrical)
- 2) Make sure all top drawers are empty as we need to remove them for the installation.
- 3) Make sure any sink or cooktop cabinet are completely empty.
- 4) Please have pathways clear of furniture and any other obstacles.
- 5) Since countertops are very heavy and may cause serious injury if dropped please keep small children and animals away from the work area

NOTE:

*We do recommend that you wait 24 hours to have a plumber come in to hook up your plumbing after the install. We use silicone to help secure the sink to the stone, and it is recommended that you wait 24 hours for it to set.

*In order to ensure the technician remains focused on accuracy, please allow him to work without interruption. He will be happy to answer questions before or after the templating or installation. Also, please make sure pets are secured in a separate area
